

imagine strengthens cybersecurity services with Ensign InfoSecurity

Singapore, 8 March 2021 – In a continued effort to better provide the Bruneian economy with the best and latest in digital solutions, imagine Sdn. Bhd. announced its partnership with Ensign InfoSecurity (Ensign), Asia’s largest pure-play cybersecurity firm. This collaboration will enable imagine to strengthen its cybersecurity proposition to enterprises and government organisations in Brunei, as it delivers Ensign’s end-to-end portfolio of cybersecurity services and solutions including Cyber Threat Intelligence, Managed Detection and Response (MDR), Managed Security Services (MSS) and Incident Response.

This alliance is the latest among a series of imagine’s regional and international partnerships that aims to contribute to Brunei’s economic growth and stability. It centres upon Brunei’s Digital Economy Masterplan 2025 which includes the strengthening of the country’s cybersecurity landscape, together with the growth of digital usage that calls for the protection of data, infrastructure, and networks against growing cyber threats.

imagine continues its commitment to ensure that both the government and enterprise corporations operating in Brunei are provided with a diverse portfolio of options, thereby protecting the valuable and sensitive data in their operations. This complements the government’s continued encouragement for the use of digital tools to propel the nation forward in all aspects of life that include, but not limited to, trade, finance and banking, healthcare, education, agriculture, tourism, energy, as well as logistics and transportation.

Commenting on this latest product offering, imagine’s CEO, Suzannawati binti Haji Suharju said, “We are pleased to partner with Ensign with their strong reputation, expertise and insight into the world of cybersecurity. This is part and parcel of imagine’s contribution to the Wawasan 2035 that calls for cooperation from all sectors in the country including the private sector to harness digitalisation efforts as we move towards realising a Smart Nation.”

With cyber attacks becoming more prevalent around the world, Brunei is not immune to cybercrimes where attacks can include theft of sensitive personal data. By partnering with Ensign, imagine is now in a position to offer security as a service to government and corporate clients. Ensign’s core competencies are in the provision of cybersecurity advisory and assurance services, architecture design and systems integration services, and managed security services for advanced threat detection, threat hunting, and incident response.

“Similar to how we protect our finances, we must now look at information security as paramount to any operations that rely on network infrastructure across multiple major industries. As a by-product of this partnership, we at imagine believe that not only will this benefit local entities, it will also attract investors into Brunei with the knowledge that

our digital eco-system has the capability to keep valuable information safe and secure,” Ms Suzannawati added.

Of this partnership with imagine, Charles Ng, EVP of International Business and Consulting at Ensign said, “Brunei is a key market for Ensign InfoSecurity in Asia Pacific, and for some years, we have invested highly capable resources to protect our clients in Brunei. By partnering with imagine, we hope to make available world-class cyber offerings in Brunei, and also co-develop capabilities. We hope to contribute to Wawasan 2035 by building a more resilient digital eco-system.”

Ensign brings to the table two decades of proven track record as a trusted cybersecurity service provider across Asia Pacific. By tapping on Ensign’s in-depth experience and diverse expertise, this partnership can help organisations—across a wide range of industries in Brunei, including oil and gas, financial services, healthcare, and the public sector—adopt a more proactive cybersecurity posture.

Furthermore, Ensign brings advanced solutions and bespoke services that enable organisations to build secure, digitally resilient operations. Through Ensign’s MSS and MDR solutions, which leverage automation and contextualised cyber threat intelligence, organisations will have better visibility of their networks and endpoints, be able to detect emerging threats faster, and resolve increasingly sophisticated attacks more effectively.

Ensign Consulting’s services also enable organisations to enhance their cybersecurity maturity, and establish an effective cyber defence to mitigate the evolving and emerging risks in their expanding digital ecosystem. This builds up cyber resiliency for organisations as they digitally transform to seize the opportunities in the digital economy.
