Singapore, 09 December 2021 – Ensign InfoSecurity (Ensign), Asia’s largest pure-play cybersecurity firm, has recently signed a Memorandum of Understanding (MoU) to form a strategic alliance with CMT Information & Communication (CMT), a leading company in the network security industry in Korea, with a heritage of providing cyber security solutions since 2008. The new partnership aims to strengthen the two companies’ position in South Korea’s cybersecurity market while enhancing their offerings and value to clients.

Enterprises today need to contend with multiple challenging cyber threat trends, including advanced persistent threats, double extortion ransomware models, and cybercrime-as-a service. Consequently, they need to equip themselves with best-of-breed solutions that can help them identify, protect, detect, respond, and recover from cyberattacks.

Ensign and CMT plan to leverage their respective expertise to provide a full suite of end-to-end cybersecurity services for enterprises as part of this strategic alliance. This includes cyber risk management and consulting, managed security services, as well as cybersecurity threat intelligence offerings. The two companies will also jointly promote new business development and customer sales.

Ensign brings to the table experience, expertise, and best practices from across the Asia Pacific, and it can enable enterprises across a wide range of industries to adopt a more

proactive and robust cybersecurity posture. In addition, CMT's deep knowledge of the market and recognised capabilities in security control and other services can help enterprises more effectively safeguard themselves from advanced threats.

The partnership comes at an opportune time as South Korea forges ahead with its Korean Digital New Deal and accelerates digital technology adoption. However, rapid digitalisation can also expand organisations' digital attack surface and introduce vulnerabilities for threat actors to exploit. To maximise the potential of advanced technologies, organisations will need to build secure-by-design digital infrastructure and continuously improve their cyber defences to protect their digital assets.

"Cyberattacks have increased in both volume and sophistication over the course of the pandemic and are threatening to undermine many enterprises' digital transformation journey. This has heightened the need for more robust cybersecurity solutions among enterprises," said KookDong Kim, CEO, CMT Information and Communication. "We are excited about this partnership, and we welcome the opportunity to leverage Ensign InfoSecurity's experience to augment our cybersecurity services. This will enable us to address our customers' shifting cyber risks more effectively."

"South Korea is a key market for us, and we will continue to grow our presence and capabilities here. By tapping on CMT's market knowledge and expertise, we can help enterprises build digitally resilient operations and enhance their cyber maturity with our end-to-end portfolio of cybersecurity solutions and services," said Charles Ng, Executive Vice President of International Business and Consulting, Ensign InfoSecurity. "We hope to contribute to South Korea's national agenda by fostering a more secure, vibrant digital economy."

END

About Ensign InfoSecurity

Ensign InfoSecurity is the largest, pure-play end-to-end cybersecurity service provider in Asia. Headquartered in Singapore, Ensign offers bespoke solutions and services to address their clients' cybersecurity needs. Their core competencies are in the provision of cybersecurity advisory and assurance services, architecture design and systems integration services, and managed security services for advanced threat detection, threat hunting, and incident response. Underpinning these competencies is in-house research and development in cybersecurity. Ensign has two decades of proven track record as a trusted and relevant service provider, serving clients from the public and private sectors in the Asia Pacific region.
